

Solutions for Policing the 21st Century

Safe Cities was established in 2006 to provide intelligent solutions to complex ICT problems facing law enforcement. Already Safe Cities have established the first operational automatic custody photography system in the UK, using artificial intelligence, and providing substantial benefits in terms of productivity, efficiency, and reduced staffing requirements.

Our mission is to help Police and Security organizations keep our cities safe, while reducing policing costs and increasing efficiency and effectiveness.

Our method is to automate mundane processes, and apply artificial intelligence and other advanced information technologies to assist law enforcement organisations to carry out the complex tasks required to police our rapidly changing 21st century communities.

Our advanced technologies programme brings you tomorrow's solutions today.

Safe Cities have developed a range of products and services. Our product portfolio includes artificial intelligence software developed for a variety of core law enforcement processes including custody photography, CCTV surveillance and analysis, automatic extraction of witness albums from real-time CCTV images, image quality assurance, automatic face recognition, image database standardisation, and several mobile technologies.

Safe Cities was recently awarded a prize by the Association of Police and Public Security Suppliers at the Home Office Scientific Development Branch exhibition (HOSDB 2007) at RAF Halton. The 'Commended' in the Equipment and Technology Innovation award 2007 was for Safe Cities' brand new FIND custody photography system.

Safe Cities offers consultancy services in the fields of image processing, artificial intelligence software/hardware, and the building of bespoke intelligence gathering, surveillance, and secure area monitoring/control software and hardware.

"With the new (Safe Cities) digital database and iFact software, still covert ID parades can be compiled in minutes... The great benefit is that covert ID procedures can be carried out in a timely manner, increasing the prospect of a witness making a positive identification."
Inspector Nick Verity, North Yorkshire Police, The Custodial Review, Issue 40 February 2006, p.43.
